## ACHIEVEMENTS

---

- Successfully integrated Shopify with Amazon Prime using API connectivity.
- Developed an application that facilitates API communication with Walmart, creating a marketplace company based on Shopify infrastructure.
- Adapted the theme infrastructure to support Shopify's drag-and-drop feature, allowing users to easily manage products and content.

## WORK EXPERIENCE

---

### Wadaaa Marketplace

Martch 2021 - July 2023

- **Role and Responsibilities:**
  - Initially created a marketplace site using the Webkul plugin. Due to unmet expectations, we decided to abandon the plugin and developed our own custom marketplace extension.
  - Developed the custom extension using PHP, Laravel, and jQuery, with a focus on security and performance optimizations.
  - The UI/UX design was crafted on Figma and implemented with customized CSS, HTML, and JavaScript based on the designs.
  - Developed an application that integrates all products listed on Walmart into our website via APIs, utilizing Guzzle HTTP client, jQuery, and the Laravel framework.

### Technologies Used:

- Programming Languages and Frameworks: PHP, Liquid, Ruby (for initial setup with Webkul), Laravel
- Front-End Development: HTML, CSS, jQuery
- API Integration and Management: Guzzle
- Version Control: GitLab, GitHub

### EZ Commerce US

February 2023 - June 2023

- **www.scentdecor.com Website Development and Optimization:**
  - I developed and customized the www.scentdecor.com website from scratch using Shopify, tailoring it to the client's specifications.
  - Integrated with Amazon Prime to ensure seamless listing and management of products on the platform.
  - Enhanced product visuals using Photoshop to improve the site's aesthetics and optimize conversions.
  - Created and managed advertising campaigns through Google Ads to drive traffic and increase sales.
  - Designed and integrated video content on the website, increasing user engagement and time spent on the site.
  - Performed SEO optimization to enhance the website's visibility in search engines.
  - Effectively used Liquid, HTML, CSS, and jQuery technologies throughout the project.

## Vapor Handel GmbH

January 2024 - January 2025

- **E-commerce Integration: Developing a Dropshipping Application Between Shopify and Elfbargermany Plenty Markets**
  - This application I developed automates the dropshipping process between the Shopify and Elfbargermany platforms via API integration. The project was implemented using various technologies and tools to optimize e-commerce workflows and accelerate order management.
  - Project Phases:
    - API Integration: A Shopify developer account was created, an API key was obtained, and order data was fetched via Postman. The data flow was managed using Shopify API with Ajax and jQuery.
    - Backend Development: A robust backend infrastructure was built using the Laravel framework, handling data management and API operations. Various Laravel libraries were utilized to manage order processing, product updates, and security measures.
    - CMS Development: A user-friendly content management system (CMS) was designed and integrated. This system allows users to easily manage platform operations.
    - Order Submission: Orders fetched from Shopify were automatically sent to relevant stores through the Elfbargermany and PlentyMarket APIs. This ensured the fast and accurate transfer of order data.
  - **Technologies Used:**
    - Frontend: jQuery, Ajax
    - Backend: Laravel PHP Framework
    - API Integration: Shopify API, Elfbargermany API, PlentyMarket API
    - Data Management: MySQL
    - Tools: Postman (API testing and management)
    - CMS Development: Laravel CMS structure
    - Others: Git (Version control)

## CERTIFICATES

- Foundations: Introduction to Product Development Opportunities
- Product Education: Upgrade Shopify Checkout
- Storefront API Customization
- Liquid optimization for performance
- Customizing Themes
- Marketing Your Shopify Services as a Partner
